

HW 3 Rubric

Problem 3:	Is the function squareplot in the appropriate support functions file and is it defined correctly with the proper intake variables?	___ / 1
	Does the docstring for the function squareplot include and describe the following sections: • Summary (does not need a title, should be 1 sentence and then a longer summary at the beginning) • Parameters, • Outputs, • Examples, • See Also (should reference square function) • Revisions. -0.5 point for every description that is not correct. -1 for each section not present. They may include other sections but are not required to, lose all points if no docstring.	___ / 7
	Does the function create an array x from the inputs without a loop? -1 if x is created with a loop	___/2
	Does the function create an array y from x by calling the function square? -1 if y is created in another way.	___/2
	Is a figure created by plotting x vs. y?	___/2
	Does the figure have the axes labeled and title correct?	___/3
	Does the plot save as a properly named pdf if saveplot=True? -1 point in not named properly, -1 if a graph is always saved even if saveplot=false	___ / 3
	Total points for problem 3:	___ / 20
